

For Tricor, an environmentally preferred product or service is one that delivers comparable or superior performance to an alternative one while utilizing fewer resources, containing fewer toxic materials, boasting a longer lifecycle. We have developed a “green index” for the products we propose.

One tree: This product helps reduce the use of other harmful products. It is not made from a biodegradable, non-petroleum or organic material.

Two trees: This product has some recycled content in it and helps encourage the use of and develops a market for recycled base products. These products are considered Environmentally Friendly.

Three trees: This product is bio-degradable or leaves the lightest footprint on the earth possible.

Reuse and recycling are the most efficient and beneficial Green practices available today. Through our practices, we hope to “spread the Green” and lessen our carbon footprint. Our goal is to have the least environmental impact possible by recommending products, stocks, substrates and processes to our clients that support this goal.
